| <ul style="list-style-type: none"><li>Built HPC-based ML pipelines integrating <b>50+ years of USDA, NOAA data</b> for county-level crop forecasting.</li><li>Improved test <b>R<sup>2</sup> from 0.39 to 0.77</b> using seasonal features, regional clustering, PCA, and random forests.</li></ul> |                                                |

## PROJECTS

|                                                                                                                                                                                                                                                                                                |                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>BruinPlanner (DataRes @ UCLA)</b>                                                                                                                                                                                                                                                           | Sept 2024 - Mar 2025 |
| <ul style="list-style-type: none"><li>Built a <b>RAG</b> course recommender with transformer embeddings and <b>Pinecone</b>, improving relevance by <b>~50%</b>.</li><li>Developed course-data pipelines for vector search, degree filtering, and <b>LLM</b> recommendations.</li></ul>        |                      |
| <b>Agar.io Reinforcement Learning (DataRes @ UCLA)</b>                                                                                                                                                                                                                                         | Mar 2025 - June 2025 |
| <ul style="list-style-type: none"><li>Built a custom Agar.io <b>RL</b> environment in <b>C++</b> with Python/OpenAI Gym bindings and multi-agent support.</li><li>Trained <b>PPO</b> actor-critic agents in <b>PyTorch</b> using spatial-grid states and configurable action spaces.</li></ul> |                      |

## SKILLS, AWARDS, LEADERSHIP

- Skills:** Python, TypeScript, C++, SQL, **Docker**, Git, Linux, Electron, Firebase, AI Agents, RAG, LLM Evaluation, PyTorch, Snowflake, Pinecone, vector search, reinforcement learning, **API Testing**
- Awards:** 1st Place in Kaggle Competition, Dean's Honor List
- Leadership:** Lead, Bruin Sports Analytics; Founder, Bruin Bunnies Dance Team
